# Migration Framework Layouts Maintenance WorkFlow

- The migration framework as an integral tool to handle migrations, from the layout definitions maintenance to the development of import files.

- Why?, the reason is to have a central application to administer data migrations from the layout definitions until the data extraction.

Migration Diagram

Defined in meetings between the migration team, consultants and key users.

Import / Export Tables and Fields Definition

WEB Migration Framework

External System Data

From local IT.

The import is done using custom BaaN V sessions, BaaN Exchange and sequential dumps import.

BaaN V Server

Cross Reference Files

From consultants and key users

Catalog Tables

Addresses, Business Partners, PO numbers, SO numbers
These xref come from baan5 to Migration Framework
and are extracted via Oracle SQL.

Item Costing Data Validation
by Carlos Kassab Gómez on August 15 2011 at 17:29:11

It is important to validate data after processing.

It is possible to add comments to the layout even when it is in a step not controlled by us.

Work Flow Steps In The Migration Process

[+EPLSITE+]

Start → **Assign the layout to the consultant**

↓

The functional consultant defines fields to extract and how values are assigned.

Data migration team reviews the definition for any concerns or doubts before the data extraction.

Problems Found → (back to functional consultant defines fields)

No Problems Found ↓

The data migration team configures the layout in the Migration Framework → **Data Export And Validation**

↑ **Data Import**

↑ **Last Data Migration Cycle**

No ↑ → **Reassign layouts for revision to the consultants for next migration simulation(dry run) or golive.**

Yes → **End**
